

Install QuickBooks® from the Hard Drive

There may be times when QuickBooks® simply will not install from the CD. If that happens, you can use the following procedure.

- Insert the QuickBooks® installation CD into the drive. If the InstallShield Wizard starts, close it.
- Double-click the **My Computer** (Windows XP or 2000) or **Computer** (Windows 7 or Vista) icon on the Windows desktop and double-click the CD drive letter.
- Right-click the **QBooks** folder and select **Copy**.
- Right-click an empty space on your Windows Desktop and select **Paste**.
- From the CD right-click the **Thirdparty** folder and click **Copy**.
- Right-click an empty space on your Windows desktop and click **Paste**.
- Double-click the **QBooks** folder on your desktop to open it.
- Double-click **Setup.exe** or **Setup**, whichever one you see depending on whether Windows Explorer is configured to show or hide file extensions. The correct file lists Application in the Type column.
- Follow the instructions to install QuickBooks®.
